

## RIZEN (RZN)

A Decentralized Finance Platform

Authors: Rizencoin, Richard, Kriptolab

Whitepaper v2.0

2021

### ABSTRACT

The rise and popularity of BEP20 standard digital tokens in the Binance chain ecosystem have emerged as an important asset class in this Blockchain era. These tokens have all the advantages that blockchains and Binance chain have to offer in terms of transparency in total number of coins, owners, minting, fast confirmation times, transactions details and smart contract execution. Tokens on the Binance blockchain can serve several different functions. This paper will specifically focus on RZN as a coin that has a store value and maintains good price fluctuation by its unique supply mechanism launched as DeFi platform.

## 1. VISION

Our vision is to create a decentralised and distributed, fast and reliable, secure and transparent, inclusive and participatory, rule-based and community-centric DeFi ecosystem in an interactive and permission-less way.

## 2. MISSION

Our mission is to enable the next generation to be able to be financially freedom by just participating on our platform. By building on top of BSC, our applications will be able to be deployed in a peer-to-peer environment, with complete fairness, transparency, and visibility. We believe RizenCoin is revolutionary and will change everyone's expectations of how fair and fast applications and staking can be.

## 3. OVERVIEW

Nowadays, holding digital assets is better than holding gold and fiat. But there are still some problems we have to face. One major issue is huge volatility in price and demand. Due to fixed supply Bitcoin has become a good store of value. It's more than a currency now. It is called digital gold and included in the asset class. On the other hand, Binance (BNB) is becoming a popular currency in the world of utility and people still use BNB daily because the transaction fee is low when compared to Bitcoin and Ethereum.

There are some innovative tokens or Blockchains coming with new strategies and architecture to solve various problems that Bitcoin and Ethereum currently facing. The new innovation could take place if those could solve various problems. The crypto market and digital Blockchain assets has developed into a vibrant ecosystem of investors, speculators, and traders, exchanging thousands of blockchain assets.

Unfortunately, the sophistication of financial markets hasn't been followed while participants have little capability of trading the time value of assets. Interest rates fill the gap between people with surplus

assets they can't use, and people without assets (which have a productive or investment use), trading the time value of assets benefits both parties, and creates non-zero-sum wealth.

RIZEN is the native coin of Rizen DeFi ecosystem and the first community centric project on BSC combining proof of stake, proof of liquidity and proof of transactions and it marks as the first experimental community-driven DeFi project with unique staking and supply mechanism. Rizen gives a lifetime passive reward from staking which can anytime and instantly be withdrawn. The more transactions happen the more rewards.

RIZEN introduces a decentralized finance ecosystem for the easy swap of BEP20 tokens, frictionless yield farming and a lifetime based staking rewards without the flaws of existing approaches, enabling proper money markets to function, and creating a safe positive-yield approach to storing assets and also farming simultaneously and make the system easily accessible and user friendly.

#### **4. COIN ALLOCATIONS**

RIZEN has a fixed maximum supply of 100,000 RZN tokens. Marketing and development ~ 15%, Farming ~ 15%, Listing ~ 10%, devs/team ~ 0% while more than 60% have been fully distributed to the community via the snapshot as per the migration from eth to bsc.

Rizen supply is reduced by burning 1% fee from unstaking. And 1% fee from every transaction distributed to stakers. Also, Rizen holders can get more incentives from the Rizen platform by engaging with the Rizen community, staking APR is based on the transactions in the network. Rizen has chosen the low supply of tokens to create a balance between supply, scarcity and demand.

## 5. THE CORE OF RIZEN

Rizen is based on the Decentralized Finance concept which creates a permission-less financial system that provides an effective environment for the customers and makes it eco-friendly. A transparent code is available for the purpose of auditing and developing the keen interest of the user since it provides the ability for the customer to find a bug in the system. Anyone can publicly view all the transaction activities, it stops privacy issues by mining all the record transactions by default.

Permission-less DeFi approach specifies that the system is accessible without any third party involvement. Globally, consider these smart contracts as the internet and all the latest technologies have made the world very little. Thus, it is designed specifically so that it can be accessed globally in the availability of the internet.

Rizen has been developed by a very qualified team which is very experienced in Blockchain technology, the team which is very focused towards providing their customers the best. Everyone contributes their fair share in development. They are organized and work under their great leaders. Rizen has been developed by using the proper problem-solving and decision making methods. Many conflicts occurred during the complete process of development, but they resolved the conflicts competently.

It encompasses qualified team of Blockchain developers, contributors and experts ready to implement a custom solution. Producing the results quickly and efficiently, but never compromising on quality. With senior Blockchain developers, testers, and experienced project management on board, Rizen is bound to get the most out of this profit-generating technology.

## 6. RIZENSWAP

Swapping on other platforms (e.g. ethereum based DEXes) takes a huge fee than you earn from trade and is not fairly rewarding. But, RizenSwap gives you peace in that case by imposing a low fee while swapping your

RZN with other BEP20 tokens and fee from RZN transactions will be given to stakers. Users could swap any listed token with RZN.

RizenSwap token (xRZN) is the native rewarding token of our RizenSwap platform which is fully and fair launched by decentralized distribution to the community via farming, staking and airdrop.

RizenSwap token (xRZN) initial supply is 13,000 xRZN minted for initial airdrop to the community, liquidity and listing. RizenSwap token (xRZN) supply will increase by every block where emission rate is 0.01 xRZN per block which can be increased up to 0.02 xRZN per block in the future. The only distribution way of xRZN is by farming and staking selected tokens. Community can maximize their earnings via staking/farming both RZN and xRZN with initial APR of up to 2900%, which could be reduced as more farming/staking comes in and stabilizes at around 4% - 20%, and all fees earned from the platform will be used to buy back and burn xRZN tokens.

## 7. ROADMAP

### Epoch 1

- ❑ Team Formation
- ❑ Research
- ❑ Content Development

### Epoch 2

- ❑ Developers & Contributors On-boarding
- ❑ Platform Development Progress

### Epoch 3

- ❑ Planning and development of Rizen Coin
- ❑ 1st Marketing Campaign
- ❑ Launch of the Staking Program

### Epoch 4

- ❑ Pre-Sale at Official Telegram group
- ❑ Uniswap Liquidity: 50% of Pre-Sale
- ❑ Exchange Listing: Hotbit
- ❑ Launch of the Farm Program
- ❑ Team tokens burnt

#### Epoch 5

- ❑ 2nd Marketing Campaign
- ❑ Migration into BSC and expand the network
- ❑ Launch of the Swap platform

#### Epoch 6

- ❑ Partnerships
- ❑ Second round smart contract audit.

#### Epoch 7

- ❑ Development of Mobile App for Swap and Staking
- ❑ GitHub page working with all the docs

#### Disclaimer

The purpose of this White Paper is to present information relating to the technical aspects of our RizenCoin project to potential RZN purchasers in light of the proposed Token sale. It is just an overview of our proposed project. This information is not intended to be exhaustive and does not constitute a contractual relationship. Its sole purpose is to provide reasonable information to potential RZN holders in order for them to determine whether to undertake, of their own accord, a thorough analysis of the company with the intent of acquiring RZN.

However, if you decide to participate in our Risen sale to purchase RZN as an investment, RizenCoin explicitly warns you that investing in RZN carries a high level of risk. Our website gives you access to information about us, our products and services. If you use this website, it means that you understand and accept these important waivers of liability: We have made every effort to make sure that information on this website is

up to date and accurate. However, we still cannot guarantee the accuracy or validity of the information.
